S

REVENUE INTELLIGENCE INBOX / PRIVATE HIRING EXERCISE

One selected day. A queue of decisions.

21 August 2026 · Asia/Kolkata
Evidence-led routing for calls and meetings

THE SAMPLE AT A GLANCE

44	unique sources
18	usable transcripts
40.9%	text coverage

Selected activity, not a team performance report.

A queue that puts evidence before activity totals

ACTIVITY

30 calls + 14 meetings
One day in Asia/Kolkata
Distinct identity: (type, source ID)

TEXT COVERAGE

18 / 44 = 40.9% after update
17 / 44 = 38.6% initially
Missing text stays visible as intake.

REVIEW PRIORITY

M07: multiple reported product issues
M06: one old unpaid exception
M09: fresh invite still expired

THREE FINDINGS THAT SHAPED THE PRODUCT

01 PARTNER PATH

M01 · turn 21
The partner accepted a unique referral link after rejecting manual email introductions as hard to scale.

Product effect: Manager brief prioritises written terms, referral link and eligibility checklist.

02 COLLECTION EXCEPTION

M06 · turn 10
One expense-recovery invoice had been unpaid for months; the reason was still unknown.

Product effect: surfaced as an unresolved customer issue, not a confirmed product fit or fixed problem.

03 WORKAROUND ≠ FIX

M07 · turn 15
The alternate upload path worked, but added steps. The direct path still needed investigation.

Product effect: detail view keeps workaround and unresolved defect distinct.

No pipeline value, win rate, or account relationship is inferred from conversation text.

A compact workspace for triage, evidence, and correction

OVERVIEW

Four headline counts define their denominators. Hourly activity uses local start time. Filters cover source type, person, route, and review state. Metric clicks open the matching inbox view.

Call reps and calendar organisers remain separate roles.

CONVERSATION INBOX

Search, sort, filter, and open all 44 source records. Missing transcripts receive an intake state instead of invented analysis. Each detail view shows raw metadata, supplied text, evidence, uncertainty, next action, owner, and revision.

ROUTING & REVIEW

Suggested routes stay distinct from human overrides. One or more routes can be assigned with a required reason. Mark reviewed or reopen. A newer source revision marks analysis pending review and does not clear the override.

OUTPUTS

Each active route gets a separate Markdown file. The JSON manifest preserves source ID, revision, routes, review state, freshness, override flag, and relative output paths. Repeat export replaces the archive; it does not accumulate duplicate active files.

Deliberately left out: forecasts, revenue totals, win rates, CRM account matching, and automated prospect scoring.

M07: keep the customer issue visible without claiming a fix

CUSTOMER EVIDENCE / M07 · TURN 15

“The workaround does not mean the direct upload issue has been resolved.”

01

Description

Saved edit stayed stale on the displayed screen.

ROOT CAUSE UNKNOWN

02

Attachment

Recreate payment failed; Review path uploaded.

WORKAROUND ONLY

03

Reimbursements

Processing state disabled selection.

STATUS UNCONFIRMED

04

Mark as paid

Previous amount carried into the next payment.

REFRESH DEFECT REPORTED

ROUTING DECISION

MANUAL ROUTE: CUSTOMER FOLLOW-UP

Override reason: keep an active customer response visible while the product investigation remains open. Human review stays in the analysis and is available as an additional route.

SOURCE / ANALYSIS / DECISION

THREE SEPARATE LAYERS

r2 replaces source payload and transcript. Analysis freshness changes independently. The saved route and reason persist through later imports and refresh.

A reproducible replay, with uncertainty made visible

01 Import r1 → 02 Repeat shuffled r1 → 03 Manually route M07 → 04 Apply update r2 → 05 Replay older r1 → 06 Refresh

CHECKED COUNTS

Initial: 44 unique, 17 usable
Repeat: +0 records
Update: still 44, now 18 usable
Older r1: ignored for all 44
M07: r2 transcript visible; route preserved.

IMPLEMENTATION

Static app with localStorage persistence. Imports use full-payload upsert by source type + ID. Analyses are pre-generated and evidence-linked; no runtime AI or paid service.

DELIBERATELY REJECTED

No “best leads” or rep ranking from a selected, non-representative day. Trade-off: less apparent sales scoring, but fewer unsupported claims and no fabricated pipeline.

OTHER TRADE-OFFS

Local browser storage is simple to reproduce but not shared across devices. Analysis of new transcripts becomes “Pending review”; a human must confirm it. Missing text stays an intake state.

Source checks: M01 turn 21 · M06 turn 10 · M07 turn 15. Export manifest and replay tests are included with editable source.
